

SCRUM REPORT and MEETING AGENDA

Report #: 8 Project Name: Travel Ahoy
Date: 4/29/21 Prepared by: Hunter Baker

Attendees for the meeting

1. Brandon Stokes
2. Shion Ito
3. Aaron Brown
4. Aarish Brohi
5. Hunter Baker

Agenda for the meeting

1. Discuss about the recent progress with the POI API and the implementation of the new feature to go on the right side of the page with the News, covid, and weather
2. Discuss about the current launch time that it takes and the problem with creating a return date option - and how much that may increase the time
3. Meeting to find a solution for a loading animation so that the user knows about the querying is being completed in the project
4. Discuss the current state of the overall user experience and reflected on the user study once more to see if we should add any changes to the website.
5. Discuss about the loading animation and its current state

Overall accomplishments since last meeting

1. Finalized the accessibility options to the next main.ejs page
2. Created a selector to organize the right side tab
3. Added chart display for COVID data
4. Allowed them to click on the airplane name - However linking them to the exact ticket has been a problem
5. Made the GUI look more presentable for the user so that they can clearly see the flight options better
6. Made the website more responsive so that the right tabs do not extend more than the actual website - current solution is kinda static though

Tasks completed by each team member since last meeting

Task description	Assigned to	Completed?
Continue to expand the accessibility options to the next main.ejs page	Shion	Yes
Create a more organized way to display the information on the right tabs (looks too crowded at the moment)	Aaron, Brandon	Yes
Add chart display for COVID data	Aarish	Yes
Allow them to click on the airplane name to get them to ticket website	Hunter and Aarish	Yes

Make the GUI look more presentable for the user so that they can clearly see the flight options better	Aaron, Shion and Brandon	Yes
Add end date option for round trips if wanted	Hunter and Aarish	Yes
Make the website more responsive so that the right tabs do not extend more than the actual website.	Shion	Yes

Plans for next period

1. Create a POI tab for the right columns so that the user can see options around their destination that they can travel
2. Changing the overall input query format so that it fits the new auto fill criterias.
3. Develop a better loading animation that will not break
4. Create better options for the flights so that it can be organized and cleanly shown for the user.
5. Get the covid graph set up correctly so that it looks neater as well as add info boxes about covid.
6. Center the contents that are on the right column
7. Relocate the Accessibility options.

Task assignment per team member (to be completed before the next meeting)

Task description	Assigned to
Point of interest API and figuring out how to implement them to the tabs on the right	Aarish, Brandon, and Hunter
Changing the overall input query format that we are currently using to fit the autofilling querying we developed earlier in a better way. (Change to index.html and main.ejs)	Aaron and Shion
Find a better Loading Animation so that the user can see that their information is being queried	All
Offer more flight options for the user and organize them to have them in selectable boxes	Hunter and Brandon
Fix the current size changing right column, especially when it changes to covid data	Shion
Make sure that all content are centered on the right column	All
Change the current accessibility option location so that the user can find it easier.	Shion, Brandon,

	and Aaron
--	-----------

Project management status

1. Wrapping up the final portions of the project, we are definitely on track, according to the burndown chart, to finishing the overall project. Few things that we are lacking are the style consistency, and we discussed an overall color scheme that will hopefully bring the project in a good direction.
2. Communication and github wise we are continuing the mob coding methodology where we all take turns being the driver of the group.
3. Overall we are beginning to transition to the final steps of our project and will continue to record and develop our website.

Minutes from previous meeting

In our last meeting we were able to use the feedback we received from our user studies to develop a more user friendly website. We also decided on improving a lot more on the UI and designs of the website. Furthermore, we decided on making the website more responsive to different changes as well as importing the settings of the accessabilities from the index.html to the main.ejs pages. Finally we discussed our plans for the final features of POI and organizing the information better.
